SSS Auto launches it's new website

As part of SSS Auto continuous development to ensure that we provide our customers with the best and most up to date information, SSS is proud to announce the launch of its new website. SSS Auto Parts' website is aimed at giving our customers a more user friendly environment, filled with information about the company, it's services and product range. Over the coming months we will continue to add information, articles and news bulletins not only about SSS Auto parts, but also about the industry. We feel that our website should reflect who we are, a leading supplier, importer and manufacturer of aftermarket automotive parts in Australia and New Zealand

Please take a moment to navigate through our website, www.sssauto.com.au and explore it's content, and watch out for our product specials.

Your feedback is important to us, so do not hesitate to let us know what additional information you would like to have access to on our website.

PERFECT fit

Guaranteed to be Perfect in Every Way.

Perfect Fit focuses on the wheels that keep the industry turning in this issue. In business, low fuel, maintenance and availability of parts at competitive prices are some of the key factors that affect operational cost of a business. SSS understands these needs and has brought in a range of commercial van body parts specifically to address this market segment.

Toyota Hiace has been one of the top commercial vans since it was launched in 1972. The van has a

low maintenance cost, does it's job safely and efficiently. With all these benefits, no wonder Toyota Hiace has the

highest market share(31.2%) of commercial vans. Ford Econovan is the other popular commercial van with a 9.2% market share.

Whether you choose the SWB or the LWB Econovan, you'll be driving one of Australia's most popular, versatile and enduring workhorses.

Other commercial model parts that are available in the Perfect Fit range are:

Hiace SBV, Townace, Spacia Van and many more.

Please look for our insert in this issue, for an update of our Perfect Fit range. Or contact your local branch sales team to find out more.

SSS breaks into new ground, Radiators

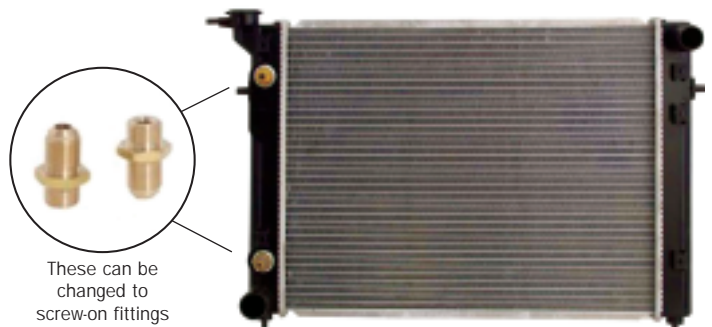

SSS never stops to explore new ground to look for the best business opportunities to benefit our customers.

This month SSS introduces it's own range of radiators with an Aluminium cooling core. Research shows that Aluminum prevails as the most common material used for passenger car and light truck radiators today. Though you may think Aluminum radiators are relatively new, Rolls Royce were the first ones to use Aluminum radiators way back in 1913. Most manufacturers turned away from heavy brass, copper, and steel and started creating radiators from Aluminium because the material is

light and strong which is great for making radiators. Though it doesn't quite have the heat dissipating capacity of copper or the corrosion resistance of brass, Aluminum is the material of choice for most of today's radiators. Light and intelligently designed, Aluminum radiators are standard on many of today's new cars and trucks.

The ranges currently available are Commodore V6 VN-VS, Camry DV10 (E&L), Falcon EA, EF, AU, BA and many more....

As our stocks are limited, call our friendly sales team now to check out our range of quality radiators.

Barry and Ken Fetter

continuously investing in it's people and operation. People are the key in today's customer oriented environment and Fetter has been able to maintain a team of loyal and committed staff who have been with the company for more than 15 years, Barry believes that besides looking after the staff welfare, so that they can focus in their work, a company needs to provide a good working condition and environment for growth.

"To keep up with the market changes, we have computerised our business and gone online with SSS Auto Parts since 2002. Computerisation is the way to go for the future. SSS Online is user

Success breeds success

Three generations of success story. Barry Fetter is the third generation of the Fetter Motor Parts Plus. The business started back in 1955 by Abraham Fetter (Barry's grandfather), with 3 to 4 staff. Today the Fetter has a workforce of 15 staff and many of them have been with the company for years.

According to Barry, his dad started to build their interest and train them at a young age. He recalled that he used to work for dad every Saturday at the age of 12 and today Barry is passing the Fetter's baton by training the next generation of Fetter.

Barry and his brother took over the family business in 1975, they believe that the key to the success of their 50 years business is adaptation and technology. Barry said, " You have to keep abreast with the industry changes. With the customer demanding for better services and quality products. We have to be ahead of the industry to strengthen our competitive advantages." The company achieves that by

friendly and efficient. We have established a strong partnership with SSS Auto Parts. They have been very good and supportive...to me honesty and integrity means a lot in developing a long-term relationship. Because of that we have been building and growing our business with SSS Auto Parts for years." Barry said.
